

Clarity Schedule

From resident requests to a fair, editable, publish-ready schedule

A program-wide platform that replaces disconnected forms, spreadsheets, PDFs, and manual cross-checking with one coordinated workflow for residents, chiefs, and departments.

2
connected portals

13 or 26
configurable blocks

1
source of truth

Personal assignments, calls, protected time, requests, and scheduling statistics in one place.

Designed around real graduate medical education workflows.

Flexible enough for Pediatrics, Internal Medicine, Emergency Medicine, and other training programs.

THE OPERATIONAL PROBLEM

Scheduling is not one spreadsheet

Each block combines annual rotations, monthly service schedules, protected educational time, resident preferences, leave, coverage requirements, work-hour limits, and last-minute changes. These inputs often live in separate places and must be reconciled manually.

Fragmented inputs

Forms, emails, PDFs, clinic rules, and master schedules are reviewed separately.

Repeated manual work

Chiefs rebuild the same logic and repeatedly check availability and eligibility.

Hidden conflicts

Clinic, didactics, post-call needs, adjacent calls, and leave are easy to miss.

Limited visibility

Residents lack clarity while leadership lacks a real-time readiness view.

One connected workflow

1

Collect

Preferences, leave, weekends, and master rankings.

2

Configure

Services, roles, hours, protected time, and rules.

3

Generate

Master-linked rosters and editable schedule drafts.

4

Validate

Coverage, clinic, calls, hours, and fairness checks.

Block-level readiness shows configured services, coverage status, and items requiring attention.

BUILT FOR CHIEFS

Generate faster. Edit freely. Publish with confidence.

Clarity prepares a rules-aware draft, explains conflicts, and preserves chief judgment through an Excel-like editing experience.

The screenshot displays the 'Annual scheduling structure' configuration page in the Clarity Schedule software. The interface is divided into a left sidebar, a top navigation bar, and a main content area. The sidebar includes tabs for 'Chief' and 'Resident', a 'WORKSPACE' section with links to Overview, Schedule builder (active), Schedules, Analytics, and Master schedule, and a 'PEOPLE & RULES' section with links to Residents and a 'Need a hand?' section. The top navigation bar shows a sequence of blocks from Block 1 to Block 13. The main content area is titled 'Annual scheduling structure' and includes a sub-header 'Set this once for the program. Every master schedule, resident deadline, request form, and monthly schedule follows this structure.' Below this, there are input fields for 'Academic year' (2025-2026), 'Number of blocks' (13 blocks), 'Block model' (Four-week blocks), and 'Request deadline' (90 days before block start). A 'Program-wide' toggle is also present. The main content area is divided into several sections: 'Block setup' (Dates, holidays, and services), 'People' (Residents and outside rotators), 'Protected time' (Clinics, didactics, exams, leave), 'Requests' (Days off and golden weekends), 'Rules' (Coverage, rest, and fairness targets), and 'Review & generate' (Validate inputs and create schedules). The 'Rules' section is expanded, showing 'Coverage and fairness rules' with a 'Recommended defaults' button. It includes 'Floor team coverage' (Minimum interns: 4, Minimum seniors: 1, Max consecutive nights: 5) and 'Weekend fairness' (Require one golden weekend: Saturday and Sunday off together, Saturday off target: 2, Sunday off target: 2, Full weekends worked: 1). The 'Input readiness' section shows a progress bar at 92% and a list of items: Master schedule linked (54 residents), Resident requests (47 of 47 submitted), Institutional patterns (4 institutions), Outside rotators (6 profiles complete), and Manual events (1 missing end time). A 'Clarity recommendation' button is at the bottom right.

Configure each service separately: teams or units, staffing roles, eligible PGY levels, and working-hour templates.

Program configuration

Choose the academic year, block model, deadlines, holidays, and protected events.

Service-level rules

Create any inpatient, consult, critical-care, jeopardy, night, or custom service.

Master-linked rosters

Pull residents assigned to that service and add call-pool or manual supplements.

Editable workspace

Drag, move, copy, and revise assignments while totals recalculate.

Conflict intelligence

Flag clinic, didactics, leave, adjacent calls, staffing gaps, and night conflicts.

Readiness analytics

Track pending, draft, ready, and published schedules with fairness summaries.

A clear schedule and a simpler way to request changes

Residents see their private annual plan, personal monthly assignments, and program-wide published service rosters. Their requests become structured scheduling data instead of messages that must be interpreted later.

The resident dashboard combines work hours, calls, golden weekends, clinics, didactics, leave, and requests.

Submit structured requests

Vacation, PTO, sick leave, weekends, days off, special needs, and annual preferences.

Understand every assignment

See work hours, coverage role, call type, post-call time, clinic, and didactics.

Call-switch marketplace

Offer a call, list acceptable alternatives, and volunteer for calls offered by peers.

Instant eligibility checks

Check same-day clinic, next-day clinic, duplicate assignments, and back-to-back calls.

Three people, one decision trail

Offering resident → receiving resident → chief approval

The original assignment stays unchanged until final approval, protecting schedule integrity and documenting the decision.

Benefits beyond making the calendar

Chiefs

IMMEDIATE BENEFIT

Less reconciliation, faster drafting, clearer conflicts.

PROGRAM IMPACT

More time for education, resident support, and leadership.

Residents

IMMEDIATE BENEFIT

Transparent assignments, easier requests, safer switches.

PROGRAM IMPACT

Improved trust, predictability, communication, and fairness.

Department

IMMEDIATE BENEFIT

Consistent rules, approvals, readiness, and exports.

PROGRAM IMPACT

Better resilience, auditability, coverage awareness, and continuity.

What makes Clarity different

- Flexible by institution, specialty, service, unit, PGY level, shift type, and block structure.
- Human-in-the-loop: the system recommends and validates; chiefs retain final control.
- Rules are entered once and reused while block-specific exceptions remain editable.
- Master schedules, service schedules, requests, analytics, and approvals stay linked.
- Designed around residency workflows rather than generic employee shift scheduling.

A practical pilot

Phase 1 | Configure

Load one academic year, resident profiles, institution patterns, and two representative services.

Phase 2 | Parallel test

Generate one block beside the current process and compare coverage, conflicts, fairness, and editing time.

Phase 3 | Evaluate

Collect chief and resident feedback, refine rules, then decide whether to expand program-wide.

Transform residency scheduling from a recurring manual project into a transparent, reusable, and safer program workflow.
